

Salvador Fuentes Jr.

Senior Software Engineer

Irvine, CA | [linkedin.com/in/fuentesjr](https://www.linkedin.com/in/fuentesjr) | fuentesjr.dev | fuentesjr@gmail.com

Senior software engineer with 15+ years building and operating backend platforms at high-growth technology companies. At GitHub, co-led billing for **Copilot for Individuals** — a **\$10M ARR** product — while extending ownership beyond core scope into cross-team infrastructure work, incident response, and upstream open-source contribution. Deep expertise in billing systems, subscriptions, distributed services, and production reliability. Integrating **AI-assisted development** into daily practice since 2023; actively developing in Go and exploring agentic engineering workflows.

KEY HIGHLIGHTS

- Co-led billing delivery for GitHub Copilot for Individuals — a product that reached **\$10M ARR** within months of launch.
- Led **MySQL Proxima EU** provisioning work outside core billing scope, coordinating delivery across four global engineering teams.
- Extended billing database cluster capacity by **8 months** through strategic deprecation of legacy MySQL tables.
- Upstreamed a fix to the **money-open-exchange-rates** OSS library during a production incident, benefiting the wider developer community.

TECHNICAL SKILLS

Languages:	Ruby, Go, JavaScript
Backend:	Ruby on Rails, RSpec, Sinatra, Sorbet, Packwerk, Twirp, Domain-Driven Design, monolith decomposition
Data & Messaging:	MySQL, PostgreSQL, Redis, Kafka, Memcached, Trino
Payments & Billing:	Zuora, Stripe, subscription billing, mobile IAP (Apple & Google), US sales tax compliance
Observability:	Datadog, Sentry, New Relic, SLOs, incident response
CI/CD:	GitHub Actions, CircleCI, Docker
AI Engineering:	GitHub Copilot, Claude Code, OpenAI Codex; LLM-assisted workflows (daily practice since 2023)
Frontend:	React, ViewComponent, Primer, Catalyst

PROFESSIONAL EXPERIENCE

Senior Software Engineer | GitHub

Remote (Irvine, CA) | July 2021 – July 2025

- **Co-led billing delivery** for **Copilot for Individuals** — a product that reached **\$10M ARR** within months of launch — resolving the most complex post-launch support escalations and guiding other engineers through a subscription-based add-on billing model new to the team.
- Partnered across billing and mobile teams to deliver **Apple and Google In-App Purchase** support for **Copilot**, helping establish the two-team working model that carried the feature to launch.
- **Led Fanout Tracking** for **MySQL Proxima EU** production stamp provisioning outside core billing scope when database-infrastructure lacked bandwidth — coordinating delivery across secret-scanning, proxima-infra, GLB, and deploy-support teams.
- Served as **first responder** during a major billing availability incident; restored customer access to critical pages, hardened the currency conversion stack with metrics and caching, and contributed an upstream fix to the **money-open-exchange-rates** open-source library benefiting the broader developer community.

- Extended billing database cluster capacity by **8 months** through strategic deprecation of legacy **MySQL** tables and unused custom fields, improving both platform runway and internal data analytics in collaboration with data and database-infrastructure teams.
- Resolved high-impact customer billing issues including **Zuora invoice** email delivery failures, **3D Secure** authentication errors, enterprise Pay Now page load failures, failed enterprise downgrades, and systemic webhook failures; drove a **Microsoft ICM escalation** to resolve Azure usage-reporting discrepancies.
- Shipped billing for **GitHub Advanced Security**, self-serve enterprise marketplace subscriptions, and **U.S. Sales Tax** for self-serve customers — including co-building the tax exemption certificates service.
- Built **Datadog** monitors, dashboards, and **SLOs** across billing services, supporting reliability and on-call response.

Senior Rails Engineer | Brookstone Capital Management

Costa Mesa, CA | May 2019 – July 2021

- Supported flagship financial advisor products and built internal workflow tooling for advisor services across multiple engineering teams.
- Initiated development of a consumer-facing lead generation product for the marketing team.
- Strengthened application security with **JWTs**, **CSPs**, **Brakeman** audits, and dependency updates; built internal gems to decouple shared concerns.
- Designed **CI/CD pipelines** with **CircleCI** and **GitHub Actions**; introduced **New Relic APM** to diagnose database bottlenecks.
- **Mentored engineers** and formalized architecture decision records, testing standards, and security best practices.

Senior Software Engineer | YP (formerly AT&T Interactive)

Glendale, CA | January 2011 – June 2018

- Served as **technical lead** for the consumer tools team, building internal tools and prototypes that reached production.
- Packaged applications in **Docker** containers to reduce engineer onboarding time; delivered technical talks on Docker and V8 internals to **35+ engineers**.

EARLIER EXPERIENCE

Backend Developer, 72andSunny (Los Angeles, CA) | **Software Engineer**, iizuu inc. (Marina Del Rey, CA) | **Software Developer**, e7 Architecture Studio (Los Angeles, CA)

EDUCATION & CERTIFICATIONS

University of California, Davis — Computer Science coursework

Cloudera Certified Developer for Apache Hadoop (CCDH)
